

## E04NLF – NAG Fortran Library Routine Document

**Note.** Before using this routine, please read the Users' Note for your implementation to check the interpretation of bold italicised terms and other implementation-dependent details.

### 1 Purpose

To supply optional parameters to E04NKF from an external file.

### 2 Specification

```
SUBROUTINE E04NLF(IOPTNS, INFORM)
  INTEGER          IOPTNS, INFORM
```

### 3 Description

E04NLF may be used to supply values for optional parameters to E04NKF. E04NLF reads an external file and each line of the file defines a single optional parameter. It is only necessary to supply values for those parameters whose values are to be different from their default values.

Each optional parameter is defined by a single character string of up to 72 characters, consisting of one or more items. The items associated with a given option must be separated by spaces, or equal signs [=]. Alphabetic characters may be upper or lower case. The string

```
Print Level = 1
```

is an example of a string used to set an optional parameter. For each option the string contains one or more of the following items:

- (a) A mandatory keyword.
- (b) A phrase that qualifies the keyword.
- (c) A number that specifies an INTEGER or *real* value. Such numbers may be up to 16 contiguous characters in Fortran 77's I, F, E or D formats, terminated by a space if this is not the last item on the line.

Blank strings and comments are ignored. A comment begins with an asterisk (\*) and all subsequent characters in the string are regarded as part of the comment.

The file containing the options must start with **begin** and must finish with **end**. An example of a valid options file is:

```
Begin * Example options file
  Print Level = 1
End
```

Normally each line of the file is printed as it is read, on the current advisory message unit (see X04ABF), but printing may be suppressed using the keyword **nolist**. To suppress printing of **begin**, **nolist** must be the first option supplied as in the file:

```
Begin
  Nolist
  Print Level = 1
End
```

Printing will automatically be turned on again after a call to E04NKF and may be turned on again at any time using the keyword **list**.

Optional parameter settings are preserved following a call to E04NKF, and so the keyword **defaults** is provided to allow the user to reset all the optional parameters to their default values prior to a subsequent call to E04NKF.

A complete list of optional parameters, their abbreviations, synonyms and default values is given in Section 11 of the document for E04NKF.

## 4 References

None.

## 5 Parameters

1: IOPTNS — INTEGER *Input*

*On entry:* the unit number of the options file to be read.

*Constraint:*  $0 \leq \text{IOPTNS} \leq 99$ .

2: INFORM — INTEGER *Output*

*On exit:* contains zero if the options file has been successfully read and a value  $> 0$  otherwise, as indicated below.

INFORM = 1

IOPTNS is not in the range [0, 99].

INFORM = 2

**begin** was found, but end-of-file was found before **end** was found.

INFORM = 3

end-of-file was found before **begin** was found.

## 6 Error Indicators and Warnings

If a line is not recognized as a valid option, then a warning message is output on the current advisory message unit (see X04ABF).

## 7 Accuracy

Not applicable.

## 8 Further Comments

E04NMF may also be used to supply optional parameters to E04NKF.

## 9 Example

This example solves the same problem as the example for E04NKF, but in addition illustrates the use of E04NLF and E04NMF to set optional parameters for E04NKF.

In this example the options file read by E04NLF is appended to the data file for the program (see Section 9.2). It would usually be more convenient in practice to keep the data file and the options file separate.

### 9.1 Program Text

**Note.** The listing of the example program presented below uses bold italicised terms to denote precision-dependent details. Please read the Users' Note for your implementation to check the interpretation of these terms. As explained in the Essential Introduction to this manual, the results produced may not be identical for all implementations.
